7.) Using System Components	7

### 1.) Overview

This document is provided as a user guide for the Visual Studio Code product offering on the AWS Marketplace. Please reach out to <a href="mailto:support@cloudimg.co.uk">support@cloudimg.co.uk</a> if any issues are encountered following this user guide for the chosen product offering.

## 2.) Access & Security

Please update the security group of the target instance to allow the below ports and protocols for access and connectivity.

Protocol Type Port Description	
--------------------------------	--

RDP TCP	3389	Remote Desktop Access
---------	------	-----------------------

## 3.) System Requirements

The minimum system requirements for the chosen product offering can be found below

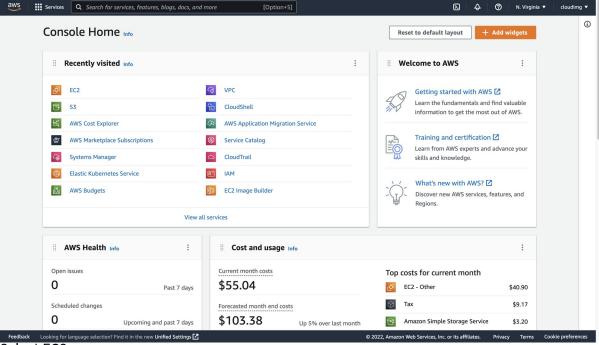

Minimum CPU	Minimum RAM	Required Disk Space
1	1 GB	30GB

## 4.) Connecting to the Instance

Once launched in the Amazon EC2 Service, please connect to the instance via an RDP client using the **Administrator** user. Please allow the EC2 Instance to pass 2/2 status checks before connecting via RDP to allow the system enough time to complete the boot process.

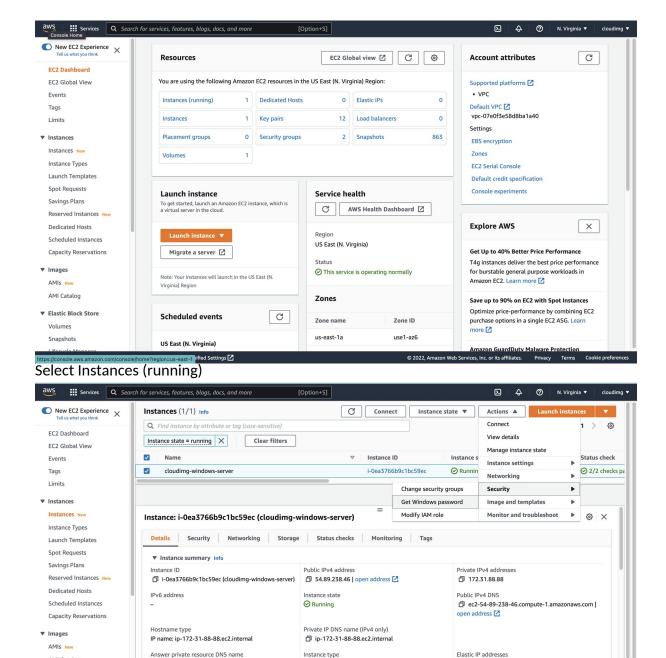

To obtain the randomly generate password on boot for the Administrator user, please follow the below steps in the AWS Console.

Log into the Target AWS Account > Select the region of which was chosen to host the newly launched clouding AMI

t3.medium

□ vpc-07e0f3e58d8ba1a40 
☑

Search for the newly launched EC2 Instance Select the Radio button above for the instance Click Actions > Security > Get Windows password

Auto-assigned IP address

54.89.238.46 [Public IP]

AMI Catalog

Volumes

AWS Compute Optimizer finding

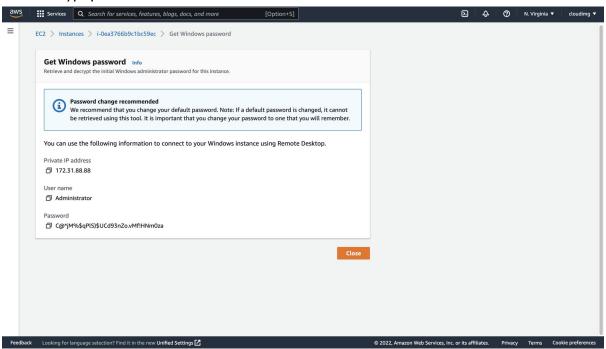

Learn more 🗹

3 Opt-in to AWS Compute Optimizer for recommenda

Click Browse and upload the key pair selected during the launch of the EC2 instance from the AWS Marketplace.

#### Click Decrypt password

The Administrator password will now appear in plain text like the above example. Take a copy of this value and open a Remote Desktop Client Application.

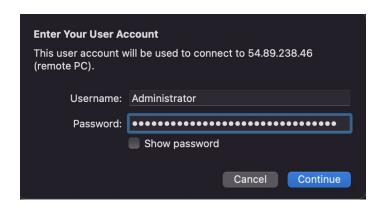

Create a new connection and enter the IP address of the newly launched EC2 Instance. For this example, the public IP address will be used as the server has been launched in a public subnet. Use the private IP address where applicable for your environment if you have a private connection into the AWS VPC of which hosts the EC2 Instance. These Private connections often take the form of a VPN connection.

#### Click Add

Once added, double click the connection profile created in the above step, you will be prompted for a username & password. Enter the below values.

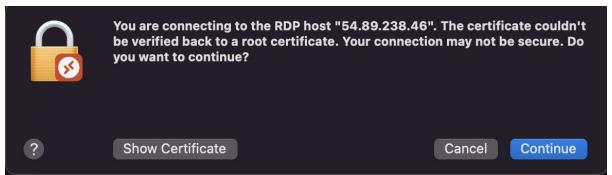

**Username: Administrator** 

Password: DECRYPTED VALUE RETRIEVED FROM THE ABOVE STEPS

**Click Continue** 

Click Continue if a pop up like the above appears.

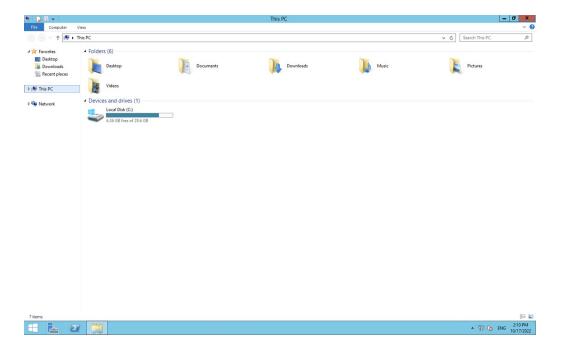

You have now successfully connected to the Windows Server hosted in AWS.

## 5.) Filesystem Configuration

Please see below for a screenshot of the server disk configuration and specific mount point mappings for software locations.

## 6.) Server Components

Please see below for a list of installed server components.
